

Neha Parmar

Senior Frontend Engineer | JavaScript - TypeScript | Component Architecture - State Management - Performance

Bangalore, India | Available immediately | +91 8871545193 | neha.parmar06@gmail.com | linkedin.com/in/nehaparmar06

PROFESSIONAL SUMMARY

Senior Frontend Engineer (SDE-III) with 10 years of experience in frontend application design and development, with strong expertise in Vue.js, TypeScript, and JavaScript. Experienced in building reusable component architectures and centralized state management, optimizing performance on data-heavy applications, leading a team of 4 frontend engineers, and delivering projects in Agile environments.

KEY SKILLS and EXPERTISE

Front-end Engineering and Core Technologies: HTML5, CSS3, SCSS, JavaScript (ES6+), TypeScript

Modern UI Frameworks and Architecture: Vue.js (Vue 3), Vuex, Pinia, Angular (2+, AngularJS), component-driven architectures, reusable component libraries, design systems

API Integration and Web Communication: RESTful API integration, API contract design with backend teams, asynchronous data handling

Testing and Quality: Jest, unit and end-to-end testing, code reviews, production-issue debugging, pre-release verification

UI/UX Engineering and Performance: Responsive design, cross-browser compatibility, accessibility standards (WCAG), code splitting, lazy loading, rendering optimization, memory management, Web Vitals

Build Tools and Development Workflow: Vite, Webpack, Git, GitHub Actions (CI/CD), Vercel

Software Architecture and Engineering Principles: Centralized state management (single source of truth), modular and scalable frontend structures, frontend coding standards and best practices

AI-Augmented Development: GitHub Copilot (CLI and IDE), Claude Code, review practices for AI-generated code

Technical Leadership and Delivery: Agile/Scrum practices, technical leadership, code and design reviews, mentoring, stakeholder communication, cross-functional collaboration

Design Tools: Figma, design-to-code, UI/UX principles, usability testing

EXPERIENCE & PROJECTS

Independent Projects – Frontend Engineer (Self-Directed)

Jul 2026 – Present | **Tech Stack:** Vue 3, Vite, TypeScript, Figma, Vercel, Claude Code

Project Overview: Designed and built a personal portfolio site end to end, from my own Figma design through to production deployment.

Key Responsibilities:

- Designed the site in Figma and implemented it in Vue 3 and TypeScript.
- Used AI-assisted development with Claude Code, writing custom prompts to scaffold Vue components and styles from my Figma designs, check accessibility, and configure the Vercel deployment; reviewed and refined all generated code.
- Authored a project context file for Claude Code defining the project's structure and conventions, giving it deeper understanding of the codebase for more consistent, on-spec output.
- Built a responsive layout to WCAG accessibility standards, deployed on Vercel with automatic deployment on push.

Maersk Global Service Centre – Software Engineer III (SDE-3), Frontend

Oct 2021 – Jun 2026 | **Tech Stack:** HTML5, CSS3, SCSS, JavaScript, TypeScript, Vue.js, Vuex, REST APIs, Jest, Git, GitHub Actions

Project Overview: Developed and maintained Self-Service Instant Booking (SSIB), the customer-facing five-screen booking web application behind Maersk Spot, used by Maersk's global customers. The flow covers origin and destination entry, container and commodity configuration, sailing selection, value-added services, and instant booking confirmation.

Key Responsibilities:

- Developed and maintained the five-screen SSIB booking flow using Vue.js and TypeScript.
- Built reusable, modular UI components (form, selection, and data-display) shared across all five booking screens, owning their conventions and API design.
- Owned centralized state management for the booking flow using Vuex; designed the shared store and enforced single-source-of-truth patterns.
- Troubleshooted and resolved frontend issues across the booking flow, including reactivity and navigation defects traced to duplicated store references.

- Optimized performance on data-heavy booking screens through code splitting, lazy loading, and rendering optimization; addressed memory management in long-lived booking sessions; implemented responsive, cross-browser layouts for a global customer base.
- Integrated REST APIs in close collaboration with backend teams, including defining API contracts for booking data.
- Led a team of 4 frontend engineers: conducted code reviews, ran design reviews ahead of implementation, and defined frontend best practices and standards.
- Collaborated with UI/UX designers, backend developers, and Product to deliver the booking experience, and communicated technical trade-offs to stakeholders.
- Used GitHub Copilot and Claude Code for test scaffolding and debugging, with team review practices for AI-generated code.

Achievements:

- Maintained 95%+ Jest test coverage on owned modules.
- Caught a reactivity defect in pre-release verification and fixed it at the root by removing a duplicate store reference, preventing a navigation-blocking issue from reaching customers.

Zenmonics Inc. (acquired by FIS Global, June 2020) – Senior Software Engineer

Nov 2018 – Sep 2021 | **Tech Stack:** HTML5, CSS3, SCSS, TypeScript, Angular 2, REST APIs (Java backend), Git

Project Overview: Developed Starlight, Zenmonics' Online Account Opening and Online Banking suite, which became part of the FIS IFS platform after FIS acquired Zenmonics. The suite enables customers of small US banks to open accounts fully online.

Key Responsibilities:

- Developed Starlight's frontend using Angular 2 and TypeScript, integrated with Java backend REST services.
- Built reusable, component-based multi-step forms with layered validation.
- Led code reviews and peer programming sessions and drove architectural improvements across the frontend codebase.

Achievements:

- Delivered a fully online account-opening experience for customers of small US banks.

Fidelity National Financial India – Frontend Developer

Mar 2016 – Oct 2018 | **Tech Stack:** HTML5, CSS3, JavaScript, AngularJS, Ionic 3, REST APIs

Project Overview: Developed a suite of cross-brand mobile applications for US property search, and Online Order for Title and Escrow, an add-on to the Property Search platform for ordering workflows.

Key Responsibilities:

- Built responsive, cross-brand mobile applications using Ionic 3 and AngularJS on a shared component base across brands.
- Built Online Order for Title and Escrow, integrating REST APIs for ordering workflows.
- Owned frontend development end-to-end, from discovery through production release.

Achievements:

- Delivered a suite of 14 cross-brand mobile applications within one year, serving 10K+ users.

CERTIFICATIONS

AWS Certified AI Practitioner (AIF-C01) – 2026 | [Verify](#)

Google UX Design Professional Certificate – 2024 | [Verify](#)

EDUCATION

PG Diploma in Software Development (Full Stack) – IIIT Bangalore – 2019.

PG Diploma in Advanced Computing – CDAC Bangalore – 2016.

Bachelor of Engineering (B.E.), Electrical Engineering – SSCET Bhilai – 2015.
